Document Name:

Unexamined Japanese Patent Publication No. 11-44668

Publication Date: February 16, 1999

Title of the Invention:

Heater Equipped Oxygen Sensor

(Page 4)

[0009]

By employing the above-described structure wherein a heat generating portion is brought into contact with an oxygen sensing element at their lateral sides, generated heat of a heater is directly transferred from the heat generating portion of a heating element to the oxygen sensing element via a contact portion. Additionally, radiated heat in the vicinity of the contact portion can be effectively used for warming up the oxygen sensing element. Thus, it becomes possible to promptly warm up the oxygen sensing element. The activation time of the sensor can be shortened.
